PROFESSIONAL SUMMARY

Associate Product Manager with 3+ years across product and software engineering, currently owning the roadmap, requirements, and release cycle for three production mobile apps at ParisarONE — a multi-tenant society-management and local-commerce platform. M.Sc. IT with a hands-on engineering background: reads the schema, reproduces the bug, writes the spec, validates the release. Drove a full Java/Kotlin-to-Flutter migration and defined the billing and payments rules behind a Razorpay monetization stack, working daily across engineering, design, sales, and business. Targeting an APM role in B2B SaaS, marketplace, or payments-adjacent products.

CORE COMPETENCIES

Product: Product Roadmap · Product Requirement Documents (PRD) · User Stories & Acceptance Criteria · Backlog Prioritization · Agile & Scrum · Sprint Planning · UAT & Release Management · Requirement Gathering · Root Cause Analysis · Stakeholder Management · Cross-Functional Leadership · User Research · Go-To-Market Support

Technical: SQL · MySQL · REST APIs · API Design · Flutter (Dart) · React.js · JavaScript · Python · PHP · Firebase Cloud Messaging · Razorpay Payments · Git & GitHub · Postman · Docker

Domain & Tools: Two-Sided Marketplace · B2B SaaS · PropTech · Payments & Billing · Multi-Tenant SaaS · Mobile (iOS & Android) · Trust & Safety · Jira · Figma · Confluence · ServiceNow · Grafana · Excel

PROFESSIONAL EXPERIENCE

Associate Product Manager | ParisarONE (ParisarOne Tech)
Mumbai, India | Sep 2025 – Present

Housing-society management + local-commerce platform — 3 Flutter apps, 4 user personas, one shared PHP/MySQL backend.

- **Own the roadmap, requirements, and release sequencing for three production apps** — ParisarONE User (residents & society management), Security (gate staff), and Business (brokers & local businesses) — all on one shared backend of 160+ REST endpoints, making migration order and backward compatibility a gating factor on every release.
- **Drove end-to-end migration of the platform from native Java/Kotlin to a single Flutter codebase** across iOS and Android, coordinating developer, design, and QA workstreams and phasing cutover so live societies were never disrupted.
- **Defined the monetization model for a two-sided marketplace** — paid business enrolments (professional, shop, company) plus commission on closed rent/sell property deals — unified through one Razorpay payment rail, alongside tiered module subscriptions for societies.
- **Rewrote the maintenance billing rules** after tracing resident complaints to root cause: specified oldest-first (FIFO) payment settlement and a payment-to-bill allocation ledger so receipts reconcile to bills at society audit, plus a dry-run-first migration to correct historical records.
- **Specified and shipped 0-to-1 visitor management and notifications** — one-time vs. daily pass enforcement, guard-logged walk-ins modelled as a distinct concept, and a gate-to-resident push approval loop (Firebase Cloud Messaging) the Security app previously had no capability for.
- **Prioritized a trust, safety, and privacy track** — ML Kit face-liveness verification for professional onboarding, password hashing via a zero-downtime lazy-upgrade migration, and multi-tenant data scoping on every record mutation.
- **Ran discovery, spec writing, UAT, and release sign-off** with engineering, design, sales, and business stakeholders, converting live user reports into reproduced root causes and written acceptance criteria across billing, visitors, complaints, notices, facility booking, and marketplace modules (localized in English, Hindi, Gujarati, Marathi).

Consultant – Software Engineer | LTIMindtree (Banking Transformation Practice) – ABSA Bank
Navi Mumbai, India | Aug 2020 – Feb 2023

- **Delivered the Loan Management Dashboard used by ABSA Bank operations teams across 10 countries** — loan application review, repayment tracking, and approval workflows in ReactJS, JavaScript, HTML5, and CSS3.
- **Migrated legacy frontend components to ReactJS, cutting dashboard load times by 40%**; integrated real-time backend APIs so loan status and repayment schedules updated without page refresh.
- **Implemented JWT role-based access control, search/filter workflows, and responsive layouts**; gathered requirements directly from banking operations users and partnered with backend teams on API contracts.
- **Supported production operations via batch monitoring, SQL analysis, and job scheduling** (CA WADE, FICO Debt Manager), performing root cause analysis on recurring failures.

Full Stack Developer Intern | Meta Craftlab AI
Mumbai, India | Jun 2024 – Aug 2024

- **Built responsive dashboard frontends in React, HTML, CSS, and JavaScript**; created user flows and prototypes for clearer navigation and integrated backend APIs for dynamic data visualization.

EDUCATION

M.Sc., Information Technology | Vidyalankar School of IT, Mumbai | 2023 – 2025 | CGPA: 8.27
B.Sc., Information Technology | Vidyalankar School of IT, Mumbai | 2018 – 2020 | CGPA: 8.30

CERTIFICATIONS & PRODUCT CASE STUDIES

Certifications: Introduction to Project Management · Introduction to AI for Business · Cyber Security APT Defender

Product Case Studies: Gullak — fintech savings app (personas, prioritization, success metrics) · StudySync — collaborative learning concept
