PROFESSIONAL SUMMARY

Technology professional with **3+ years across banking systems and product engineering**. Spent two and a half years as an **LTIMindtree consultant on ABSA Bank's Loans and KYC programme**, supporting banking operations teams across 10 countries — batch operations, error analysis, SQL-based root cause analysis and stakeholder reporting. Moved into product engineering at ParisarONE, where I was the sole developer on a production society-management platform and **proposed and delivered the migration of the entire application from native Java/Kotlin to a single Flutter codebase**. Built the billing and Razorpay payments module, visitor and delivery management, and an on-device face-liveness verification flow. M.Sc. in Information Technology. Certified in Generative AI (Databricks) and UX Design (Google).

Seeking a **Business Analyst, Product Analyst or Associate Product Manager** role in fintech, payments or B2B SaaS.

CORE COMPETENCIES

Analysis & Delivery: Requirements Analysis · Root Cause Analysis · SQL Analysis · Stakeholder Reporting · UAT & Release Management · Incident Triage · Process Automation · Client Demos & Requirement Gathering · Agile & Scrum

Domain: Loans & Debt Management · KYC & Digital Onboarding · Payments, Billing & Reconciliation · Batch Operations · Face Liveness & Document Verification (ML Kit) · Trust & Safety

Technical: SQL · Oracle · Microsoft SQL Server · MySQL · REST APIs · ETL Workflows · Flutter (Dart) · React.js · JavaScript · Python · Firebase Cloud Messaging · Razorpay · Git · Postman

PROFESSIONAL EXPERIENCE

Product Manager — AI & Mobility Applications Development

August 2025 – December 2026

ParisarONE Technologies OPC Pvt. Ltd. — role commenced at Rivakraft Solutions LLP; business transitioned to ParisarONE, Feb 2026 · Mumbai

Society-management and local-commerce platform — three Flutter apps (residents, gate security, businesses and brokers) on one shared PHP/MySQL backend of 160+ REST endpoints. Early-stage company; reported directly to the Director and was the sole developer maintaining the platform in its final phase.

- **Proposed and delivered the migration of the entire application from native Java/Kotlin to a single Flutter codebase** across iOS and Android — identified that maintaining two native builds was doubling feature effort, made the recommendation to the founder, and phased the cutover so live societies were never disrupted.
- Built the **billing module and Razorpay payment-gateway integration**, including payment-to-bill allocation so receipts reconcile against outstanding dues.
- Built **visitor and delivery management** — one-time and daily visitor passes with per-day reset rules, guard-logged walk-in entries, delivery check-in, and the gate-to-resident push approval loop over Firebase Cloud Messaging, including the return notification to the gate that the platform previously had no capability for.
- Built the **notices module** and contributed to **complaints** — both used daily by residents and society committees.
- Built **marketplace and broker enrolment flows**, including an on-device **ML Kit face-liveness check** for service professionals, with a manual approval step before any listing goes live.
- Developed and maintained **REST APIs and MySQL data access** across all three applications, working across most modules of the backend.
- Handled **release sequencing, defect triage and production support**, including a dry-run-first data migration that corrected historical billing records without live disruption.
- Joined **client pitches and product demos** for prospective societies and businesses alongside the sales team, and carried field objections back into build priorities.

Consultant — System Management

August 2020 – February 2023

LTIMindtree (Banking Transformation Practice) — Client: **ABSA Bank** · Navi Mumbai

Loans and KYC programme — batch operations, system uptime and issue resolution for banking operations teams across 10 countries.

- **Automated file housekeeping for the nightly Loans and KYC batch**, replacing a manual archival routine that repeatedly stalled the run — **cut batch health-check time by 40%** and removed a recurring source of failure.
- Ran **server patching cycles across all 10 country instances**, coordinating post-patch validation and scheduling maintenance windows so nightly loan and KYC batches were never disrupted.
- Monitored **ETL workflows and database health daily** across Oracle, Microsoft SQL Server and Fiserv banking applications, using SQL analysis to catch data and job failures before operations users were affected.
- Owned **error analysis and incident resolution** — triaged failures in loan servicing and KYC verification jobs, performed root cause analysis on recurring issues, and drove bridge calls with application-support, database and infrastructure teams through to verified fixes.
- **Reported batch health, defect trends and RCA findings** to the engagement manager and ABSA operations stakeholders in weekly reviews, and gathered requirements directly from banking operations users across the 10 countries.
- Supported the **Loan Management Dashboard and KYC verification workflows** used daily by operations and compliance teams, including job scheduling in CA WADE and collections operations in FICO Debt Manager.

Full Stack Developer Intern

June 2024 – August 2024

Meta Craftlab AI · Mumbai

- Built responsive dashboard frontends in React, JavaScript, HTML and CSS; created user flows and prototypes, and integrated backend APIs for dynamic data visualisation.

SIDE PROJECTS & CASE STUDIES

Hisaab — bookkeeping for Indian shopkeepers · hisaabhai.in

Offline-first PWA that reads rather than asks: bank and UPI messages parsed on the device, bills read from a photo, WhatsApp orders priced against the shop's own list. Udhaar tracking with reminders and UPI payment links, role-scoped staff accounts, and GST-format billing. SMS and bill photos are processed on the phone and never uploaded.

2D Metaverse — real Mumbai in pixel art · live · source

Browser-based multiplayer world built from OpenStreetMap data, with proximity-based interaction, video calls, meeting rooms and guide bots. TypeScript.

AI-Enhanced KYC Onboarding · live prototype · full PRD

Six-step digital onboarding flow for an Indian investing app — Aadhaar and PAN capture, document OCR with tamper checks, a liveness selfie matched to the ID, and a risk engine scoring sanctions, PEP and fraud signals on a 0–100 scale, auto-approving below threshold and routing the rest to a human analyst. Defined the success metrics, confidence thresholds, consent and data-retention rules.

Gullak — savings for the unbanked

Savings product concept for women underserved by formal banking: village-level cash floats held by self-help-group members, inter-village liquidity, and a three-level fallback for withdrawals. Personas, gap analysis, MVP scope, two-year roadmap and a metrics hierarchy.

StudySync

Collaborative learning platform — problem framing, scoping and first-release concept.
