SUMMARY

Product and engineering professional with **4 years across banking systems and consumer product**. Spent **2 years 7 months at LTIMindtree on ABSA Bank's Loans and KYC programme**, serving banking operations teams across 10 countries through root cause analysis, SQL analysis, requirement gathering and stakeholder reporting. After a full-time M.Sc., moved into product engineering at ParisarONE, where I **proposed and delivered the migration of a production application from native Java/Kotlin to a single Flutter codebase**, then shipped billing with payment gateway integration, visitor management and on-device biometric verification.

I moved toward product because the failures I spent two and a half years fixing downstream in banking were almost always decisions made upstream. Seeking a **Product Analyst, Business Analyst or Associate Product Manager** role in fintech, payments or B2B SaaS.

SKILLS

Analysis & Delivery: Requirements Analysis, Requirement Gathering, Root Cause Analysis, SQL Analysis, Data Analysis, Stakeholder Management, Stakeholder Reporting, Dashboards & Reporting, UAT, Release Management, Incident Triage, Process Automation, Client Demos, Agile, Scrum

Domain: BFSI, Lending & Loan Management, KYC & Digital Onboarding, AML and PMLA compliance, Payments, Billing & Reconciliation, Batch Operations, Identity Verification, Trust & Safety, Risk & Fraud Signals

Technical: SQL, Oracle, Microsoft SQL Server, MySQL, REST APIs, ETL Workflows, Payment Gateway Integration (Razorpay), Flutter (Dart), React.js, JavaScript, Python, Firebase Cloud Messaging, Biometric Verification & Computer Vision (Google ML Kit), Git, Postman, Excel

EXPERIENCE

Product Manager — AI & Mobility Applications Development

August 2025 – December 2026

ParisarONE Technologies — role commenced at Rivakraft Solutions LLP; business transitioned to ParisarONE, Feb 2026 | Mumbai, India

Society-management and local-commerce platform: three Flutter applications (residents, gate security, businesses and brokers) on one shared PHP/MySQL backend of 160+ REST endpoints. Early-stage company, reporting directly to the Director.

- **Proposed and delivered the migration of the entire application from native Java/Kotlin to a single Flutter codebase** across iOS and Android. Identified that maintaining two native builds was doubling feature effort, made the recommendation to the founder, and phased the cutover so live societies were never disrupted.
- Shipped the **billing module and Razorpay payment gateway integration**, including payment-to-bill allocation so receipts reconcile against outstanding dues, plus a dry-run-first data migration that corrected historical billing records without live disruption.
- Designed and built **visitor and delivery management**: one-time and daily passes with per-day reset rules, guard-logged walk-in entries, delivery check-in, and a two-way gate-to-resident approval loop over Firebase Cloud Messaging, including the return notification to the gate that the platform previously had no capability for.
- Implemented **marketplace and broker onboarding** with on-device **biometric face-liveness verification** (Google ML Kit) for service professionals, gated behind a manual approval step before any listing goes live.
- Developed the **notices module** and contributed to **complaints**, both used daily by residents and society committees.
- Maintained **REST APIs and MySQL data access** across all three applications and 4 user personas, working across most modules of the backend.
- Owned **release sequencing, defect triage and production support** for the live platform.
- Joined **client pitches and product demos** for prospective societies and businesses alongside the sales team, and carried field objections back into build priorities.

Full Stack Developer Intern

June 2024 – August 2024

Meta Craftlab AI | Mumbai, India

- Built responsive dashboard frontends in React, JavaScript, HTML and CSS; created user flows and prototypes, and integrated backend APIs for dynamic data visualisation.

> **Master of Science (M.Sc.), Information Technology — full-time** | Vidyalankar School of Information Technology, Mumbai | 2023 – 2025 | CGPA 8.27

Consultant — System Management

August 2020 – February 2023

LTIMindtree (Banking Transformation Practice) — Client: **ABSA Bank** | Navi Mumbai, India

Loans and KYC programme: batch operations, issue resolution and system uptime for banking operations teams across 10 countries.

- Owned **error analysis and root cause analysis** across the programme: triaged failures in loan servicing and KYC verification jobs, identified recurring causes, and drove bridge calls with application-support, database and infrastructure teams through to verified fixes.
- **Automated file housekeeping for the nightly Loans and KYC batch**, replacing a manual archival routine that repeatedly stalled the run — **cut batch health-check time by 40%** and removed a recurring source of failure.
- Ran daily **SQL analysis and ETL monitoring** across Oracle, Microsoft SQL Server and Fiserv banking applications to catch data and job failures before operations users were affected.
- **Gathered requirements directly from banking operations users across 10 countries**, and reported batch health, defect trends, RCA findings and release readiness to the engagement manager and ABSA stakeholders in weekly reviews.
- Supported the **Loan Management Dashboard and KYC verification workflows** used daily by operations and compliance teams, including job scheduling in CA WADE and collections operations in FICO Debt Manager.
- Coordinated **server patching cycles across all 10 country instances**, scheduling maintenance windows and post-patch validation so nightly loan and KYC batches were never disrupted.

PROJECTS

Hisaab — bookkeeping product for Indian shopkeepers | hisaabhai.in (live)

Offline-first PWA that reads rather than asks: bank and UPI messages parsed on the device, bills read from a photo, WhatsApp orders priced against the shop's own list. Udhaar tracking with reminders and UPI payment links, role-scoped staff accounts, and GST-format billing. SMS and bill photos are processed on the phone and never uploaded. Built and maintained solo.

AI-Enhanced KYC Onboarding | binvestt-kyc.netlify.app (live prototype, full PRD)

Six-step digital onboarding flow for an Indian investing app: Aadhaar and PAN capture, document OCR with tamper checks, a liveness selfie matched to the ID, and a risk engine scoring sanctions, PEP and fraud signals on a 0–100 scale, auto-approving below threshold and routing the rest to a human analyst. Defined the success metrics, model-confidence thresholds, consent and PMLA data-retention rules.

2D Metaverse — real Mumbai in pixel art | metaverse-mzu0.onrender.com (live)

Browser-based multiplayer world built from OpenStreetMap data, with proximity-based interaction, video calls, meeting rooms and guide bots. TypeScript. Among **20 public repositories** at github.com/KUNALL0ndhe, including a MERN e-commerce application and several Svelte projects.

Gullak — savings for the unbanked

Savings product concept for women underserved by formal banking: village-level cash floats held by self-help-group members, inter-village liquidity, and a three-level fallback for withdrawals. Personas, gap analysis, MVP scope, two-year roadmap and a metrics hierarchy.

EDUCATION

Master of Science (M.Sc.), Information Technology — Vidyalankar School of Information Technology | CGPA 8.27 — 2023 – 2025

Bachelor of Science (B.Sc.), Information Technology — Vidyalankar School of Information Technology | CGPA 8.30 — 2018 – 2020
