KUNAL LONDHE

Associate Product Manager | AI & Generative AI Products · Fintech (KYC & Lending) · Payments

Mumbai, Maharashtra, India | +91 95941 17649 | kunallondhex@gmail.com

Portfolio: kunall0ndhe.github.io | linkedin.com/in/kunal-londhe-a72292232 | github.com/KUNALL0ndhe

PROFESSIONAL SUMMARY

Associate Product Manager with 4 years across product and banking technology. Spent two and a half years as an LTIMindtree consultant on ABSA Bank's Loans and KYC programme — running batch operations, error analysis and stakeholder reporting for banking operations teams across 10 countries — then moved into product at ParisarONE, where I own two features end to end across two consumer apps: Bill Management with Razorpay payments, and Visitor & Delivery Management. Authored the BRD and PRD for an ML Kit face-liveness broker verification flow — a KYC-style identity check with a manual approval gate. Certified in Generative AI (Databricks) and UX Design (Google), with a product case study on AI-powered KYC verification. Seeking a Product Manager / AI Product Manager role in fintech, payments, or B2B SaaS.

CORE COMPETENCIES

Product: Roadmap · BRD & PRD · User Stories & Acceptance Criteria · Prioritization · Agile & Scrum · Discovery & User Research · UAT & Release Management · Root Cause Analysis · Stakeholder Management · Cross-Functional Leadership

AI & Fintech: AI Product Management (AI APM) · Generative AI & LLMs · Prompt Engineering · Face Liveness & Document Verification (ML Kit) · KYC & Digital Onboarding · Loans & Debt Management · Payments, Billing & Reconciliation · Batch Operations & System Uptime · Trust & Safety

Technical: SQL · Oracle · Microsoft SQL Server · MySQL · REST APIs · ETL Workflows · Flutter (Dart) · React.js · JavaScript · Python · Firebase Cloud Messaging · Git · Postman

Tools: Jira · Productboard · ChatPRD · Confluence · Figma · ChatGPT & Claude · Perplexity · Amplitude · Granola · ServiceNow · Grafana · Postman · Excel

PROFESSIONAL EXPERIENCE

Associate Product Manager | **ParisarONE (ParisarOne Tech)**

Mumbai, India | Sep 2025 – Present

Society-management and local-commerce platform — 3 Flutter apps, 4 user personas, one shared PHP/MySQL backend of 160+ REST endpoints.

- **Owned Bill Management end to end across 2 consumer apps** — from discovery and PRD to Razorpay payment-gateway integration, UAT and release. Defined the billing engine rules after tracing recurring resident payment complaints to root cause: oldest-first (FIFO) settlement and a payment-to-bill allocation ledger so every receipt reconciles to its bill at society audit, plus a dry-run-first data migration that corrected historical records with zero live disruption.
- **Owned Visitor & Delivery Management end to end (0-to-1)** — specified and shipped one-time vs. daily pass enforcement, delivery-partner check-in, guard-logged walk-ins modelled as a distinct entity, and a gate-to-resident push approval loop (Firebase Cloud Messaging) that the platform previously had no capability for; cut manual gate-log effort and gave residents an auditable visitor trail.
- **Authored the BRD and PRD for AI broker verification (KYC-style identity check)** — every new broker registering on the marketplace must clear an ML Kit face-liveness capture matched against their submitted government ID, followed by a manual team approval gate confirming the broker is genuine before any listing goes live. Specified re-verification on each new registration, retry and rejection paths, model-confidence thresholds, and the reviewer queue for low-confidence captures.
- Own the roadmap, requirements and release sequencing for three production apps — ParisarONE User (residents), Security (gate staff) and Business (brokers and local businesses) — on one shared backend, making migration order and backward compatibility a gating factor on every release.
- Drove end-to-end migration from native Java/Kotlin to a single Flutter codebase across iOS and Android, converting senior stakeholders to the approach and phasing cutover so live societies were never disrupted; reduced duplicate build effort and unified the release train.
- Defined the monetization model for a two-sided marketplace — paid business enrolments (professional, shop, company) and commission on closed rent/sell property deals, unified through one Razorpay payment rail alongside tiered module subscriptions for societies.
- Partner daily with sales, engineering, business and data-analyst teams — running discovery, writing specs and acceptance criteria, converting live user reports into reproduced root causes, and reporting feature adoption, payment-success and defect trends back to leadership.

Consultant – System Management | **LTIMindtree (Banking Transformation Practice) — Client: ABSA Bank**
Navi Mumbai, India | Aug 2020 – Feb 2023

Consultant on ABSA Bank's Loans and KYC programme — batch operations, system uptime and issue resolution for banking operations teams across 10 countries.

- **Automated file housekeeping for the nightly Loans and KYC batch** — replaced a manual, error-prone file clean-up and archival routine that repeatedly stalled the run, removing a recurring source of human error, protecting the batch from failure, and cutting batch health-check time by 40%.
- **Ran server patching cycles across all 10 country instances** — coordinated guided patching and post-patch validation with infrastructure and application teams, scheduling maintenance windows so nightly loan and KYC batches were never disrupted.
- **Monitored ETL workflows and database health daily** — health checks across Oracle and Microsoft SQL Server databases and Fiserv banking applications, using SQL analysis to catch data and job failures before operations users were affected.
- **Owned error analysis and incident resolution** — triaged failures in loan servicing and KYC verification jobs, performed root cause analysis on recurring issues, pulled the right application-support, database and infrastructure teams onto bridge calls, and drove every issue through to a verified fix.
- **Reported to management and country stakeholders** — presented batch health, defect trends, RCA findings and release readiness to the engagement manager and ABSA operations stakeholders in weekly reviews; gathered requirements and issue context directly from banking operations users across the 10 countries.
- Supported the Loan Management Dashboard and KYC verification workflows used daily by operations and compliance teams, including job scheduling in CA WADE and collections operations in FICO Debt Manager.

Full Stack Developer Intern | **Meta Craftlab AI**
Mumbai, India | Jun 2024 – Aug 2024

- Built responsive dashboard frontends in React, HTML, CSS and JavaScript; created user flows and prototypes for clearer navigation and integrated backend APIs for dynamic data visualization.

CERTIFICATIONS

- Generative AI Fundamentals — Databricks
- Google UX Design (UI/UX) — Google
- Full Stack Developer — RST Forum

- Introduction to Project Management

PRODUCT CASE STUDIES

- **AI-Powered KYC Verification** — designed an AI-assisted digital KYC onboarding flow for a regulated lender: document OCR and data extraction, face-to-document liveness match, risk-based tiering, and straight-through processing with a human-in-the-loop review queue for low-confidence and rejected cases. Defined the success metrics (onboarding drop-off, auto-approval rate, false-reject rate, time-to-verify, cost per verification), the model-confidence thresholds, and the audit trail and data-retention rules needed for compliance sign-off.
- **Gullak — Fintech Savings App** — personas, problem framing, feature prioritization and success metrics for a micro-savings product.
- **StudySync — Collaborative Learning Platform** — concept definition, user journeys and MVP scope.

EDUCATION

M.Sc., Information Technology | Vidyalankar School of Information Technology, Mumbai | 2023 – 2025 | CGPA: 8.27

B.Sc., Information Technology | Vidyalankar School of Information Technology, Mumbai | 2018 – 2020 | CGPA: 8.30
