SUMMARY

Product and engineering professional with **4 years across banking systems and consumer product**. Spent **2 years 7 months at LTIMindtree on ABSA Bank's Loans and KYC programme** - root cause analysis, SQL analysis, requirement gathering and stakeholder reporting for banking operations teams across 10 countries. After a full-time M.Sc., moved into product engineering at ParisarONE: **proposed and delivered the migration of a production application from native Java/Kotlin to Flutter**, then shipped billing with Razorpay payments and on-device biometric verification. Targeting **Product Analyst** roles in fintech and payments, combining the banking-systems background with hands-on KYC, billing and identity work.

SKILLS

Analysis & Delivery: Requirements Analysis, Requirement Gathering, Root Cause Analysis, SQL Analysis, Data Analysis, Stakeholder Management, Dashboards & Reporting, UAT, Release Management, Incident Triage, Process Automation, Agile, Scrum

Domain: BFSI, Lending & Loan Management, KYC & Digital Onboarding, AML and PMLA compliance, Payments, Billing & Reconciliation, Batch Operations, Identity Verification, Risk & Fraud Signals

Technical: SQL, Oracle, Microsoft SQL Server, MySQL, REST APIs, ETL Workflows, Payment Gateway Integration (Razorpay), Flutter (Dart), React.js, JavaScript, Biometric Verification & Computer Vision (Google ML Kit), Git, Postman, Excel

EXPERIENCE

Product Manager

ParisarONE Technologies (role commenced at Rivakraft Solutions LLP; business transitioned Feb 2026) | Mumbai, India | August 2025 - Present — society management and broking platform: 3 Flutter apps, one PHP/MySQL backend, 160+ REST endpoints

- **Proposed and delivered the migration of the entire application from native Java/Kotlin to a single Flutter codebase** across iOS and Android. Two native builds were doubling feature effort; recommended the change to the founder and phased the cutover so live societies were never disrupted.
- Shipped the **billing module and Razorpay payment gateway integration**, with payment-to-bill allocation so receipts reconcile against outstanding dues, plus a dry-run-first migration that corrected historical billing records.
- Designed and built **visitor and delivery management**: one-time and daily passes with per-day reset rules, guard-logged walk-ins, and an approval loop between gate and resident that returns the decision to the gate.
- Implemented **marketplace and broker onboarding** with on-device **biometric face-liveness verification** (Google ML Kit), gated behind manual approval before any listing goes live; developed the notices module and contributed to complaints.
- Maintained **REST APIs and MySQL data access** across 3 applications and 4 user personas, owning release sequencing, defect triage and production support, and joined client pitches with sales.

Full Stack Developer Intern, Meta Craftlab AI | Mumbai, India | June 2024 - August 2024 — responsive dashboard frontends in React and JavaScript, user flows and prototypes, backend API integration.

> **M.Sc., Information Technology** | full-time study | 2023 - 2025

Consultant — System Management

LTIMindtree (Banking Transformation Practice), Client: **ABSA Bank** | Navi Mumbai, India | August 2020 - February 2023

- Owned **error analysis and root cause analysis** for the Loans and KYC programme serving operations teams across **10 countries**, driving bridge calls with application-support, database and infrastructure teams through to verified fixes.
- **Automated file housekeeping for the nightly Loans and KYC batch**, replacing a manual archival routine that repeatedly stalled the run - **cut batch health-check time by 40%** and removed a recurring source of failure.
- Ran daily **SQL analysis and ETL monitoring** across Oracle, Microsoft SQL Server and Fiserv banking applications to catch data and job failures before operations users were affected.
- **Gathered requirements from banking operations users across 10 countries** and reported batch health, defect trends and RCA findings to the engagement manager and ABSA stakeholders weekly. Supported the **Loan Management Dashboard and KYC verification workflows**, with job scheduling in CA WADE and collections in FICO Debt Manager.

PROJECTS

Hisaab — bookkeeping product for Indian shopkeepers | hisaabhai.in (live) — Offline-first PWA that parses bank and UPI messages on the device, reads bills from a photo, tracks udhaar with reminders and UPI payment links, and issues GST-format bills. Designed, built and shipped end to end.

AI-Enhanced KYC Onboarding | binvestt-kyc.netlify.app (live, full PRD) — Six-step onboarding for an Indian investing app: document OCR with tamper checks, a liveness selfie matched to the ID, and a risk engine scoring sanctions, PEP and fraud signals 0-100, auto-approving below threshold and routing the rest to human review. Defined the metrics, confidence thresholds and PMLA retention rules.

Also **20 public repositories** at github.com/KUNALL0ndhe, including a multiplayer 2D metaverse built on OpenStreetMap data (live).

EDUCATION

Master of Science (M.Sc.), Information Technology — Vidyalankar School of Information Technology | 2023 - 2025 (full-time) | CGPA 8.27/10

Bachelor of Science (B.Sc.), Information Technology — Vidyalankar School of Information Technology | 2018 - 2020 | CGPA 8.30/10

CERTIFICATIONS

Generative AI Fundamentals — Databricks | Google UX Design — Google | Full Stack Developer — RST Forum
